

X-PERT Health PCI-accredited training course for Health & Wellbeing Coaches

Foundation Work (e-learning and reading based on needs assessment)

(Weeks 1-4)

[PCI core training](#)

1. Core Skills (1 hour – levels 1 and 2)

This module is written by three experts on the subject of personalised care, who come from backgrounds of psychology, professional education, communication skills training and personal experience. The module takes a holistic view of health and care, and demonstrates the nature and benefits of personalised care.

2. Shared Decision Making (30 minutes – level 3)

The Personalised Care Institute curriculum (2020) articulates the values, behaviours and capabilities required by a multi-professional workforce to deliver Personalised Care. This eLearning covers aspects of the core capabilities to communicate and build relationships, as well as to engage, enable and support people, as described within the curriculum.

3. [Person Centred Approaches \(e-LfH\) – \(2 – 6 hrs\)](#)

This eLearning module supports the Person-Centred Approaches Framework, which was developed by Skills for Health, Skills for Care and NHS Health Education England. Both the Framework and this eLearning were created with input from people with experience of using health and social care services.

The scope of this eLearning is to introduce the behaviours, knowledge and skills for person-centred approaches, including the values, core communication and relationship building skills, engaging people and enabling and supporting people.

4. [Introduction to Health Literacy – NHS Health Education England and NHS Education for Scotland \(30 mins\)](#)

Health literacy is about people having enough knowledge, understanding, skills and confidence to use health information, to be active partners in their care, and to navigate health and social care systems. Therefore, to access, assess and apply health information, people need to be health literate. The health literacy levels in England are very low: 43% of 16 to 65-year-olds struggle with text-based health information; and 61% of 16 to 65-year-olds cannot understand health information that includes both text and numbers (Rowlands et al., 2015. [View article](#)).

Course Reader (supplied): Starr J. The Coaching Manual: The Definitive Guide to The Process, Principles and Skills of Personal Coaching (5th Edition): Pearson Business; 2021. 320 p. ISBN 978-1292374246.

A reading list and papers will also be supplied.
